Document Info
DJ   ART 385   Code Self Portrait   February 6, 2020

Re-state the Assignment
This assignment was to sketch a picture of ourselves then code it in processing.

Audience
The audience is the Professor and the other Students.

Hand-drawn sketches

Interaction Diagram (Interface Design)
n/a

Conveying Technical Information (Software Design)
For this project I used the draw function after setting up my canvas. I mostly used ellipses, arcs, and rects, as well as fills for the color and a black stroke on everything. I organized the code by body parts and commented on each section.

Reflections
This was a challenging project for me. I made to initial sketches, one being very abstract, and the other was more realistic. I think I put too many details into them for the skills that I have. I tried to use the same color scheme as my second sketch, but it was difficult with my limited amount of shapes to make the tears, and other minute amorphous shapes that I had no idea how to code. Overall I am content with what I coded and where I got.
